linkedin.com/in/fadi-barhoum | fadi-barhoum.github.io | github.com/Fadi-Barhoum

PROFESSIONAL SUMMARY

IT Consultant and Senior Full Stack Developer with 8 years of experience delivering enterprise platforms for UAE government and private sector clients. Sole developer on six enterprise systems built on ASP.NET Core (.NET 8–10), C#, Entity Framework Core, SQL Server and React with TypeScript, alongside Laravel and PHP work. Specialised in bilingual Arabic/English RTL interfaces, government identity integration including UAE Pass SSO, enterprise LDAP/Active Directory authentication, and AI-enabled features. Experienced across the full lifecycle: requirements analysis, architecture, development, deployment, documentation and client handover.

PROFESSIONAL EXPERIENCE

IT Consultant | **IMPACT iN** — Dubai, UAE

Oct 2025 – Present

- Lead digital transformation initiatives and technology consulting for government and private sector clients, designing and implementing scalable web and mobile solutions end to end.
- Architected and built enterprise platforms including ZeroX for the UAE Ministry of Industry and Advanced Technology, and the Impact product suite covering organizational excellence assessment, process and customer experience management, and strategic performance management.
- Integrated national identity single sign-on (UAE Pass) via a custom OAuth 2.0 authorization code flow, and enterprise LDAP/Active Directory authentication unified with local accounts.
- Delivered AI-enabled capabilities using Azure OpenAI across multiple platforms, including assistants that answer questions from each system's own data.
- Conduct technology audits covering integration, database optimisation and secure deployment, and bridge technical and business stakeholders across the full project lifecycle.

Full Stack Developer | **Elite WhereGO** — Dubai, UAE

Apr 2024 – Sep 2025

- Built dedicated web pages integrated with the mobile application backend, giving users access to all twelve mobile services directly from the website.
- Developed a responsive, high-performance corporate website for partners, riders and end users, with strong Lighthouse scores across performance, SEO, best practices and accessibility.

Full Stack Developer | **Freelance**

Feb 2018 – Present

- Deliver web applications end to end as an independent contractor — recent work includes a production Laravel 12 e-commerce and booking platform with dual payment gateways, and a multi-currency financial management system for a non-profit.
- Design relational database schemas and build custom admin panels and reporting modules giving clients direct control over content, orders, inventory and financial records.
- Deliver bilingual and multilingual interfaces with full RTL support as standard, and author technical documentation enabling handover to other developers.

Full Stack Developer | **Masar Syria** — Damascus, Syria

Jan 2021 – Mar 2022

- Developed customer-facing websites for hospitality clients, including interactive menus, event sections and online ordering.
- Built back-end management systems allowing owners to update menus, track orders and review customer feedback without developer involvement.

Software Developer | **Charitable Society for Sustainable Development** — Damascus, Syria

Sep 2019 – Apr 2023

- Developed internal software that replaced manual spreadsheet processes, streamlining beneficiary tracking and organisational reporting.
- Implemented access control and data protection measures for sensitive beneficiary records.
- Authored documentation and trained non-technical staff on new internal tools.

SELECTED PROJECTS

ENTERPRISE PLATFORMS — **IMPACT iN**

ZeroX — Government Bureaucracy Reduction Platform

ASP.NET Core 8, React 19, TypeScript, SQL Server, Entity Framework Core

Bilingual (Arabic/English, RTL) platform for the UAE Ministry of Industry and Advanced Technology that digitises how government services and internal processes are assessed, simplified and measured before and after reduction. Sole full-stack developer. Features UAE Pass single sign-on through a hand-built OAuth 2.0 authorization code flow, a matrix-based engine scoring services across five weighted axes, and a transactional Excel importer mapping spreadsheets into a five-level hierarchy with rollback.

Impact7S — Seven-Star Service Excellence Assessment Platform

ASP.NET Core 8, React 19, TypeScript, SQL Server, EF Core, Azure OpenAI, LDAP

Enterprise assessment platform running the full evaluation cycle from evidence through weighted scoring to improvement planning. Includes a multi-level maturity engine across service channels, hybrid LDAP/local authentication behind one sign-in flow, six roles scoped by channel and centre, an Azure OpenAI assistant, and Arabic PDF reporting. In production at a UAE government entity.

ImpactSPcx — Process, Service & Customer Experience Management

ASP.NET Core 8, React 19, TypeScript, SQL Server, EF Core, Azure OpenAI

Governed repository replacing scattered Word and Visio documents with one system for process documentation, service cards, journey mapping and before/after improvement. Built a snapshot-based approval workflow with automatic rollback across five action types, and a dependency-free in-browser Visio (.vsdx) importer feeding an interactive diagram engine.

ImpactST (S-Track) — Strategic Performance Management Platform

ASP.NET Core 8, React 19, TypeScript, Tailwind CSS, SQL Server, EF Core 9

Strategy-to-execution platform connecting vision and objectives to KPIs, operational plans and verified performance reporting. Designed a parent-scoped objectives hierarchy with cycle detection and weight caps preventing double-counting across the reporting layer, plus a server-side formula evaluator supporting manual, formula and external API data sources.

ImpactLS — Software Licensing & Entitlement Platform

ASP.NET Core 10, React 19, TypeScript, SQL Server, EF Core 10

In-house platform issuing digitally signed licence keys for the company product suite, with per-client expiry dates and user limits. Designed an offline verification model requiring no runtime connection to a licence server, enabling deployment inside closed government networks while making altered terms detectable. Governs four products; authored the integration specification for each consuming team.

ImpactMS — Mystery Shopping Operations Platform

Laravel 11, PHP 8.2, React 18, MySQL, Vite

Operations platform powering the company's mystery-shopping service line for UAE government clients — questionnaire design, field assignment, auditing and client reporting. Built a drag-and-drop builder supporting twelve question types, a four-role authorization layer enforcing project-level data isolation, and a nine-state task machine preventing invalid stage transitions.

INDEPENDENT PROJECTS — FREELANCE

Ivari Hair Center — Bilingual E-Commerce & Appointment Booking Platform

Laravel 12, PHP 8.2, React 19, TypeScript, Inertia.js, Filament 5, Tailwind CSS 4, MySQL

Production e-commerce and appointment-booking platform for a Dubai hair centre, handling product sales with colour and length variants alongside service bookings across three purchase flows. Integrated two payment gateways — cards and buy-now-pay-later — through a secure server-side redirect flow keeping card data off the server, with signature-verified webhooks, idempotent capture, and server-authoritative pricing. Fully bilingual with complete RTL support.

Mar Musa — Multi-Currency Financial Management System

PHP, MariaDB, JavaScript, PhpSpreadsheet, WordPress as application framework

Custom accounting platform for a non-profit managing a central fund, projects and member accounts across five currencies — roughly 20,000 lines of custom PHP across 65 admin screens, 11 purpose-built tables and 29 Excel, PDF and ZIP export/import endpoints. Designed a system-wide unique receipt-number constraint spanning six transaction tables, with self-exclusion logic for double-entry shadow rows and per-row validation on bulk imports. Resolved a chronic mobile upload failure by replacing browser-reported MIME validation with server-side content inspection across 28 handlers. Four-language interface, full RTL.

Rihlaty — Travel Agency Operations Platform

Laravel, PHP, React, MySQL, Vite

Full-stack operations platform for a travel agency — tour package building, transport bookings and reusable templates through multi-step wizards, with proposals, invoices and hotel vouchers generated as PDF documents preserving Arabic shaping and RTL. Built a date-integrity engine redistributing nights across a stay when any segment changes, keeping total duration and departure date fixed.

Additional projects — including e-commerce platforms, booking and reservation systems, business management tools and corporate websites — are documented at fadi-barhoum.github.io

TECHNICAL SKILLS

Backend C#, ASP.NET Core (.NET 8–10), Web API, Entity Framework Core, PHP 8, Laravel 11–12, Inertia.js, Filament

Frontend React 19, TypeScript, JavaScript, Vite, Tailwind CSS, Bootstrap, HTML5 / CSS3, RTL & Bilingual UI

Database SQL Server, T-SQL, Stored Procedures, Query Optimisation, MySQL, MariaDB, Code-First Migrations

Integration REST APIs, OAuth 2.0, OpenID Connect, JWT, SSO (UAE Pass), LDAP / Active Directory, Azure OpenAI, Payment Gateways (Tap, Tabby)

Platform Git, IIS, Windows Server, Azure, AWS, Swagger

CMS Sitecore, WordPress

EDUCATION, CERTIFICATION & LANGUAGES

Master's degree, Web Science — Syrian Virtual University | 2018 – 2020 | *Coursework completed, thesis pending*

Bachelor's degree, Information Technology Engineering (Software Engineering) — Damascus University | 2012 – 2018

Certification Mastering Laravel Framework and PHP — Board Infinity (Jun 2024)

Languages Arabic — Native, English — Full Professional Proficiency
